DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 9/05, 6/06, 11/07 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1, 8, 12 are rejected under 35 U.S.C. 112, second paragraph, as failing to set forth the subject matter which applicant(s) regard as their invention. Claim 1 the reference to a, b, c fails to point out applicants' invention. First $a=b=c = 100 \text{ mol } \%$ and d is a whole number. Claim 1 fails to teach the field for the saturation magnetization note line 4 pages 9. Claim 8 and 12 teach mixing raw materials. The raw materials are limited to Ca, Mg, Fe, as taught on page 13.

Claim Rejections - 35 USC § 102

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Mano et al. Mano et al teaches magnetic oxide having a Ca and Mg materials in a hematite and magnetite material that is made by the

sintering of the materials in an inert gas. Applicants may overcome the above rejection by correcting the 112 and including the language of claim 2 in the independent claim. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to have the Mg based ferrite material with a Ca ion in different ratios and to form the material in a controlled environment by sintering the material having various weight ratios of $a+b+c \leq 1$.
